To: Engineering Hiring Team | Mollie B.V. (Amsterdam)

Position: Senior Application Engineer (Amsterdam HQ)

Dear Mollie Team,

I am writing to apply for the Senior Application Engineer position in Amsterdam. As a Senior FullStack Engineer and Software Architect with over 20 years of hands-on experience building web platforms across fintech, hospitality, and eCommerce, my background aligns directly with Mollie's mission to build scalable financial products that eliminate financial bureaucracy.

Mollie's focus on building dependable platforms and scaling products like Mollie Capital and in-person payments requires engineers who understand real money movements, data integrity, and high-concurrency failure modes. My engineering track record demonstrates this hands-on craft:

- **Core Fintech & Payment Gateway Architecture:** As co-founder and software architect of Wallety, I engineered an early PCI DSS compliant payment gateway in PHP and Symfony processing 33% of domestic air travel transactions in Egypt. I designed direct acquiring bank integrations, Amadeus GDS atomic seat reservation state machines, clustered MySQL master-slave replication, and 1-second asynchronous CLI transaction batching daemons for reliable reconciliation under unstable network conditions.
- **High-Concurrency Transaction Integrity:** Architecting nationwide booking platforms for the Saudi Ministry of Standards (SASO), I engineered a deterministic 5-minute transactional state-locking engine in PHP and MySQL that completely eliminated race conditions across competing web, mobile, and backend channels for 15-minute appointment slots, backed by normalized 3NF transactional schemas and Star Schema analytics views.
- **High-Throughput Web Scale & Caching:** Scaled high-traffic web applications with multi-tier Redis and Varnish caching hierarchies, sustaining 15,000 active concurrent connections at sub-50ms latencies and offloading 85% of dynamic database read queries during breaking traffic surges.
- **Pragmatic Full-Stack Craft & Mentorship:** Daily hands-on delivery in modern PHP (Symfony, PHP 8.x OOP), TypeScript, React, Python FastAPI, compound MySQL indexing, and Docker CI/CD automation. Throughout my career, I have taken ownership of architecture design through to production delivery while mentoring junior developers, establishing agency Git SOPs, and maintaining thorough domain documentation.

I am based in Cairo and am open to relocation to Amsterdam. I welcome the opportunity to discuss how my hands-on backend and full-stack experience can contribute to Mollie's application engineering squads.

Thank you for your time and consideration.

Sincerely,

Alex (Eskandar) Seif
